

What is it?

A physical realisation of a sociogram that details the career path of lighting designers across the world.

Why did we do it?

In 2011, Light Collective scribbled out our personal branch of a lighting design family tree. Then in 2014, we tried to expand our family tree to include other designers in the UK and to demonstrate the complex web of practices and people. In 2011, we included 82 designers across 47 companies. In 2014, we expanded to include 253 designers from 142 companies.

The International Lighting Design Survey 2019 by arc magazine was the biggest yet with around 1600 lighting design practises featured. Light Collective wanted to therefore build upon their previous analysis of UK designers and expand what started as a small scale exercise sketched in a notebook by creating an infographic to illustrate the individual journeys of designers all over the world.

What does it mean?

We had a massive initial response with over 800 people sharing their data. From the responses, we have taken the countries with the most companies and used the career paths examples from lighting designers that said they were attending Light & Building. The designers names are around the outside of the sociogram, the circles represent countries and the coloured strings represent the geographical region the designer is from. You can follow their journey.

How can you take part?

The challenge of mapping the ancestry of lighting designers needs your help. We can't do it without you and have asked designers to provide their data to help us get it right. If you want to join in today or after Light & Building, we need you to share with us the companies you have worked with in your lighting design career.

What happens to the data?

In 2014, we were able to detail who worked overseas, who had worked for the most companies, that Daniel was the most popular name for lighting designers in the UK, and that there were 70% male designers and 30% female designers at that time. We found the data interesting and wanted to expand this.

The long term plan for the project is to continue to add designers on to the Family Tree as part of an online version that will grow digitally and allow us to make comparisons over the two years of the project. The creation of data is important to enable us to learn about our history and our community.

How does it work?

A coloured string from each lighting designer peg follows their career path from design company to design company. The colour of the string represents the global region they are from and the design companies are seperated into countries in large circles with each peg representing a seperate company.
